Hi Shayne,

I've looked into the boundary issue at the trilobites a little more, and have attached some images (from Google Earth and SITLA's website) showing the quarter-quarter section boundaries (which correspond in this area to the SITLA trilobite lease boundaries). All of the sources I've seen show the boundary as it is shown on the map that I brought to the field last week. Here's the SITLA website if interested: <http://platmap.trustlands.utah.gov/>.

This doesn't change anyone's responsibility to reclaim where they've mined, but we want to make sure we get the maps right going forward. I could possibly get some approximate stakes in the ground during the next trip to show the lease boundary, which we've considered to be the permit boundary. The difference in area is small enough that the total average cost per acre bond amount shouldn't need to change.

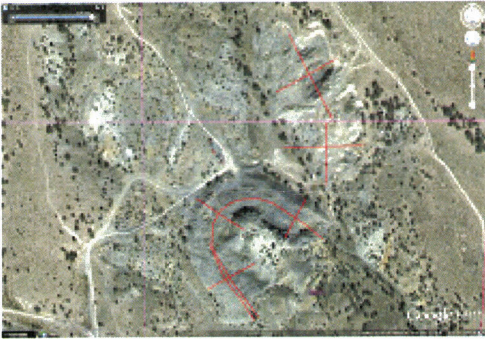

I'll be sending another email soon with some paperwork to fill out and maps that you could submit to update/amend your Notice of Intent. Let me know if you have questions.

Peter
